

THE ART OF COMBINATORICS - VOLUME II

STRUCTURE OF GRAPHS

©Douglas B. West

Introduction 1

Vertices, edges, and adjacency.	1
Isomorphism, subgraphs, and degrees.	5
Paths, cycles, and parity.	10
Graph parameters.	16
Operations on graphs.	21
Complexity.	24
Exercises.	26

Chapter 6 - Elementary Structural Concepts 34

6.1 - Trees and related topics. 35

Properties of trees.	35
Enumeration of trees.	40
Decomposition and graceful labelings.	50
Graph Packing.	55
Exercises.	61

6.2 - Vertex degrees. 73

Graphic lists.	73
Potentially vs. forcibly.	83
Vertex partitions.	88
Exercises.	89

6.3 - The reconstruction problem. 95

Counting arguments.	97
Structural arguments.	100
Edge-reconstruction.	106
Reconstruction parameters.	111
Exercises.	115

6.4 - Graph products. 119

Isometric embedding in cartesian products.	119
Product dimension.	129
Exercises.	135

Chapter 7 - Connection and Cycles 138

7.1 - Connectivity and its variants. 139

Separating sets.	139
Edge cuts.	143
Menger's theorem.	147
Min-max relations.	152
k -linked graphs and subdivisions.	162
Ordered graphs and gossip.	168
Exercises.	175

7.2 - Structure of k -connected graphs. 185

2-connected and 3-connected graphs.	185
Minimally k -connected graphs.	193
Partitions of k -connected graphs.	196
k -connected orientations	199
Exercises.	203

7.3 - Hamiltonian cycles and circumference. 209

Toughness.	210
Density conditions and stability.	214
Connectivity conditions.	220
Circumference.	224
Cycles in directed graphs.	229
Stronger conclusions.	232
Regular graphs.	238
Claw-free graphs.	243
Exercises.	248

Chapter 8 - Topological Graph Theory 260

8.1 - Embeddings and planarity. 261

Drawings and duals.	261
Euler's formula.	268
Kuratowski's Theorem.	271
Planarity testing.	278
Embeddings on grids.	281
Other embeddings.	290
Exercises.	292

8.2 - Planar graphs and coloring. 301

Approach to the Four Color Theorem.	301
-------------------------------------	-----

Discharging in planar graphs.	307	Snarks.	467
3-colorable planar graphs.	324	Faithful covers and double covers	475
Variations on coloring.	336	Exercises.	489
Exercises.	339		
8.3 - Further aspects of planarity.	347	Chapter 10 - Algebraic Aspects of Graphs	494
Hamiltonian cycles.	319	10.1 - Eigenvalues of graphs.	495
Separator theorems.	347	The characteristic polynomial.	495
1-Factors in bipartite planar graphs.	355	Eigenvalues and bipartite graphs.	498
Intersection parameters.	358	Linear algebra of real symmetric matrices.	500
Exercises.	366	Eigenvalues and graph parameters.	502
8.4 - Nonplanar graphs in the plane.	369	Eigenvalues of regular graphs.	504
Thickness andpagenumber.	369	Strongly regular graphs.	507
Crossing number.	375	Laplacian eigenvalues.	512
Exercises.	384	The normalized Laplacian (optional).	518
8.5 - Higher surfaces.	387	Exercises.	521
Surfaces of higher genus.	387	10.2 - Graphs and polynomials.	527
Euler's formula and genus.	392	Chromatic polynomial.	527
Rotation schemes.	398	Rank polynomial.	533
The Heawood formula and voltage graphs.	402	Tutte polynomial (dichromate).	535
Exercises.	413	Reliability polynomial, Matching polynomial...	539
Chapter 9 - Graph Minors and Related Topics	418	Exercises.	542
9.1 - Minors and tree-width.	419	10.3 - Graphs and groups (unwritten).	547
Testing for minors.	422	10.4 - Quasi-random graphs.	549
Forbidden minors.	423	Properties and examples.	550
Elementary aspects of treewidth.	427	Equivalence of properties.	554
Cops-and-robber.	432	Glossaries, References, Indexes	561
Brambles.	435		
Exercises.	440		
9.2 - Structure theorems.	443		
Approach to Wagner's Conjecture.	443		
WQO on trees.	446		
Exercises.	449		
9.3 - Cycles and flows.	451		
Integer flows and Tutte's conjectures.	453		
Seymour's 6-flow Theorem.	461
