## THE ART OF COMBINATORICS - VOLUME III ORDER AND OPTIMIZATION

© Douglas B. West

Introduction ..... 2
Orders and graphs. ..... 2
Subposets. ..... 5
Examples and operations. ..... 8
Exercises. ..... 11
Chapter 11 - Structure of Posets ..... 13
11.1-Saturated partitions. ..... 14
Dilworth's Theorem. ..... 14
The Greene-Kleitman Theorem. ..... 19
Further topics. ..... 27
Exercises. ..... 30
11.2 - Sperner's Theorem and LYM orders. ..... 34
The LYM property. ..... 35
Products of LYM orders. ..... 41
Sperner properties. ..... 43
Generalizations. ..... 45
Exercises. ..... 46
11.3 - Symmetric chain orders. ..... 50
Sets and multisets. ..... 51
Applications. ..... 55
Other symmetric chain orders. ..... 60
Unimodality (under construction) ..... 68
Exercises. ..... 71
11.4-Lattices. ..... 74
Examples and basic properties. ..... 74
Distributive lattices. ..... 79
Modular lattices. ..... 84
Exercises. ..... 90
11.5-Posets and graphs. ..... 94
Comparability graphs ..... 94
Canonical decomposition. ..... 100
Cover graphs and diagrams. ..... 105
Exercises. ..... 107
Chapter 12-Linear Extensions ..... 111
12.1-Preference and Measurement. ..... 112
Rankings and consensus. ..... 112
Semiorders and interval orders. ..... 117
Ferrers relations (biorders). ..... 122
Exercises. ..... 123
12.2-Order dimension. ..... 126
Definitions and examples. ..... 126
Characterization and computation. ..... 130
Bounds and removal theorems. ..... 134
Interval and Ferrers dimension (optional). ..... 140
Restricted realizers (optional). ..... 145
Exercises. ..... 147
12.3-Dimension of special classes. ..... 154
Bipartite posets. ..... 154
Dimension and planarity. ..... 163
Containment orders ..... 166
Exercises. ..... 172
12.4-Correlational inequalities. ..... 174
FKG and Ahlswede-Daykin inequalities. ..... 174
The XYZ Inequality. ..... 179
Height distribution. ..... 185
Exercises. ..... 186
12.5 - Sorting and searching. ..... 190
Balanced comparisons. ..... 190
Explicit algorithms. ..... 200
Order statistics. ..... 202
Searching in posets. ..... 204
Exercises ..... 210
Chapter 13 - Extremal \& Enumerative Problems
13.1-Families of subsets. ..... 214
Intersecting families. ..... 214
The Erdős-Ko-Rado Theorem ..... 216
The Kruskal-Katona Theorem ..... 220
Applications of linear algebra. ..... 225
Order ideals \& Chvátal's Conjecture. ..... 227
Sunflowers. ..... 231
Exercises. ..... 232
13.2-Recursive ordered sets. ..... 236
Recursive models. ..... 236
Antichain partitions. ..... 238
Chain covers. ..... 242
Exercises. ..... 252
13.3-Miscellaneous extremal problems. ..... 254
Linear discrepancy. ..... 254
Weak and fractional weak discrepancy. ..... 266
Cutsets and fibres. ..... 268
Regressions and monotone chains. ..... 274
Simple games and winning coalitions (mostly unwritten) ..... 276
Exercises. ..... 277
13.4-Möbius inversion. ..... 278
The incidence algebra ..... 280
The Möbius function and inversion. ..... 283
A taste of reciprocity (optional). ..... 289
Binomial posets (optional). ..... 295
Structure of posets (under construction). ..... 300
Exercises. ..... 302
Chapter 14-Linear \& Integer Programming305
14.1-Linear programming. ..... 306
Packing and covering. ..... 306
Linear programs and duality. ..... 309
The Simplex Algorithm. ..... 312
Farkas' Lemma and Second Neighborhoods. ..... 319
Shannon capacity and strong products. ..... 323
Matrix games ..... 327
Combinatorial applications. ..... 332
Exercises. ..... 337
14.2-Network flow. ..... 340
The standard network model ..... 340
Combinatorial applications. ..... 347
Supplies and demands. ..... 353
Minimum cost flow ..... 357
Exercises. ..... 366
14.3-Matrices and polyhedra. ..... 372
Clutters and blockers. ..... 372
$T$-cuts and $T$-joins. ..... 378
Totally unimodular matrices. ..... 384
Total dual integrality. ..... 391
Cutting planes ..... 398
Branch-and-bound (unwritten) ..... 402
Exercises. ..... 402
Chapter 15-Matroids ..... 401
15.1- Examples and properties. ..... 406
Hereditary systems and examples. ..... 406
Axiomatics of matroids. ..... 413
The span function. ..... 418
Duality and minors. ..... 422
Exercises. ..... 429
15.2-Matroids and optimization. ..... 436
Matroid intersection. ..... 436
Matroid union. ..... 441
Applications of matroid union. ..... 444
Matroid intersection algorithm. ..... 450
Matroid parity and matroid matching. ..... 455
Polymatroid rank functions. ..... 457
Polymatroids. ..... 461
Polymatroidal network flow. ..... 464
Exercises. ..... 472
15.3-Matroids and graphs. ..... 476
Connected matroids. ..... 476
Whitney's 2-Isomorphism Theorem. ..... 479
Gammoids, linkages, and Menger's Theorem ..... 485
Binary and linear matroids. ..... 490
Matroid basis graph. ..... 497
Exercises. ..... 499
15.4-From lattices to greedoids. ..... 502
Matroids and lattices. ..... 502
Convexity and antimatroids. ..... 509
Circuits in antimatroids. ..... 515
Languages and greedoids ..... 522
Rank and span in greedoids. ..... 526
Interval greedoids. ..... 529
Diameter of greedoids. ..... 532
Exercises. ..... 542
15.5-Oriented Matroids (mostly unwritten). ..... 546
Exercises. ..... 551
Appendix 1-Glossary of Terms ..... 552
Appendix 2-Summary of Notation ..... 584
Appendix 3 - Index of Definitions ..... 590
