# THE ART OF COMBINATORICS - VOLUME IV
# ARRANGEMENTS AND METHODS

## Chapter 0 - Introduction

Elementary models. 16.1.3
Identities. 16.1.7
Recurrences. 16.1.9
Generating functions. 16.1.9
Exponential generating functions. 16.1.13
Inclusion-Exclusion.
Pigeonhole Principle.

## Chapter 16 - Enumeration

**16.1 - Classical Counting Problems. 2**
Permutations and Derangements.
Catalan and Delannoy. 16.2.2
Stirling and Eulerian.
Partitions of integers. 16.1.18

**16.2 - Young tableaux. 16.6.1**
The hook-length formula. 16.6.2
The RSK correspondence. 16.6.9
Planarization. 16.6.15
Jeu de taquin. 16.6.19
Symmetric functions.

**16.3 - Generating function techniques. 16.7.1**
The Exponential Formula and Lagrange Inversion. 16.7.12
Pólya-Redfield counting. 16.7.1
The ordinary exponential formula. 16.7.16
Snake Oil. 16.7.23
WZ pairs.

**16.4 - Binomial enumeration. 16.8.1**
Reluctant functions. 16.8.2
Linear operators on polynomials. 16.8.3
Shift-invariant operators. 16.8.6
Connection coefficients (unwritten). 16.8.8

## Chapter 17 - Probabilistic Methods

**17.1 - Existence and expectation. 17.1.1**
The basic methods. 17.1.2
Deletions and alterations. 17.1.6
The Local Lemma. 17.1.10
Derandomization. 17.1.14

**17.2 - Moments and thresholds. 17.2.1**
“Almost always”. 17.2.2
Threshold functions. 17.2.6
Sharp thresholds. 17.2.10
Evolution of random graphs. 17.2.15
Vertex degrees and isomorphism. 17.2.24
Properties of the random graph. 17.2.26
Parameters of random graphs. 17.2.28

**17.3 - Further techniques. 17.3.1**
Martingales. 17.3.1
Other tail inequalities. 17.3.8
Branching processes. 17.3.11
Discrepancy. 17.3.17

**17.5 - Random processes (unwritten).**
Markov chains.
Rapid mixing and enumeration.
Random walks in graphs.
Percolation.

## Chapter 18 - Partitions, Numbers, and Games

**18.1 - Partition theorems. 18.2.1**
Ramsey’s Theorem. 18.2.1
Applications of Ramsey’s Theorem.
Infinite and Canonical Ramsey Theorems. 18.2.9
Schur, Rado, Van der Waerden. 18.3.1
The Hales-Jewett Theorem. 18.3.7
Applications. 18.3.10

**18.2 - Ramsey numbers and variations. 18.4.1**
Ramsey numbers. 18.4.1

Graph Ramsey theory. 18.4.6
Restricted Ramsey theory.
Parameter Ramsey theory. 18.4.11
Anti-Ramsey theory.
Induced Ramsey theory. 18.4.16

**18.3 - Game parameters.**
On-line Ramsey theory.
Game chromatic number.
Maker-Breaker games (unwritten).
Other combinatorial games (unwritten).

**18.4 - The Regularity Lemma.**
Regularity and the Embedding Lemma.
Applications in graph Ramsey theory.
Other applications.

## Chapter 19 - Combinatorial Designs

**19.1 - Arrangements. 704**
Latin Squares. 704.
Block Designs. 708.
Symmetric Designs. 711.
Hadamard Matrices. 715.

**19.2 - Projective Planes. 722**
Relation to Designs. 722.
Applications to Extremal Problems. 727.
Difference Sets and Multipliers. 734.

**19.3 - Further Constructions. 741**
Steiner Triple Systems: 742.
Constructions of Other Designs: 746.
Resolvable Designs and Other Tools: 748.
The Euler Conjecture (optional): 751.

**19.4 - Further Topics.**
$t$-designs and Baranyai's Theorem.
Covering Designs and the Rödl Nibble.
Wilson's Theorem.
Graph Designs.

**19.5 - Coding Theory. 19.5.1**
Block codes. 19.5.1
Linear (matrix) codes. 19.5.4
Polynomial codes. 19.5.9
Finite fields and polynomials. 19.5.14
BCH codes - multiple error correction. 19.5.19
Efficiency and accuracy. 19.5.24
Reed-Muller codes. 19.5.27
Convolutional codes. 19.5.30

## Chapter 20 - Algebra/Geometry/Topology

**20.1 - Determinants and Permanents.**
Applications of determinants.
Computation of determinants.
Permanents and matchings in planar graphs.
Van der Waerden's Conjecture.

**20.2 - Dimension and Polynomials.**
The Polynomial Method.
Families with Restricted Intersections.
Combinatorial Nullstellensatz.
Applications to Graphs.

**20.3 - Combinatorial Topology**
Sperner's Lemma and bandwidth.
Equivalence of topological statements.
Borsuk-Ulam Theorem and applications.
Gale's Lemma and applications.

**20.4 - Points, Lines, Regions.**
Extremal problems.
Points and polars.
Voronoi diagrams.
Queries and bisections.
Hyperplane arrangements.

**20.5 - Convexity (unwritten).**
Theorems of Helly, Radon, Caratheodory
Polyhedra and duality.
Applications.

## Glossary, References, Indices
